## TACTICAL LADDER

These ladders are lightweight, portable, and designed to be

A tactical ladder is a specialized tool used for various operational needs, such as breaching, accessing elevated positions, and surveillance.

They ensure durability while maintaining a manageable weight. Tactical ladders is constructed to meet military standards for ruggedness, providing reliability in high-stress, combat, or emergency situations.

## TECHNICAL SPECIFICATION:

- 1. It is made of rugged durable material.
- 2. The ladder joints makes minimum noise duringhandling and carriage even after prolonged usage.
- 3. It can withstand wear and tear on corrosion.
- 4. It is foldable/sliding and man packed by back harness.
- 5. It can withstand the weight of one fully equipped person and associate equipmentas per terrain.
- 6. It is suitable for climbing upwards on minor ice walls or crossing a crevasse as a bridge. It consists of 6 folds.
- 7. It is fabricated out of Aluminium alloy, stainless steel-
- 8. It can withstand min 150kgs and have suitable properties to withstand subzero temperature conditions up to -50°C.
- 9. Distance between steps in ladder is between 200-250mm.
- 10. Tactical ladder can be operated under any environmental temperature of 20°C to -50°C
